PRE-ORDERS OPEN NOW – SHIPS 2/1/2024

Applications

Armored cable cutters are used to cut and strip AC/BX, MC/MCAP, and Flexible Metal Conduit (Greenfield). Armored cable cutters provide an easy and clean cut without leaving burs behind.

Armored cable cutters are primarily used by electricians and low voltage technicians to run wire through commercial and industrial buildings.

Primary Users

Key Competitors

What is Armored Cable?

AC/BX, MC/MCAP, and Flexible Metal Conduit are all types of armored cable.

AC/BX and MC/MCAP typically come with wiring inside the armor while Flexible Metal Conduit is only the empty armor casing. More commonly used to run wire through commercial and industrial buildings

Current Issues

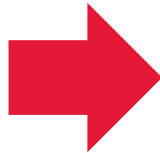

Diagonal cutters can leave burs on the armor. Wires can become damaged as a result

Manual depth adjustment screw

Competitor models need manual depth adjustment for different size armor. Adjustments are made manually through a screw on the clamp.

Milwaukee Solutions

Armored Cable Cutter
Makes clean and easy cuts, doesn't leave burs behind

Self-Adjusting Armor Clamp
Auto clamping feature simplifies armor cutting

Quick Cut-Depth Switch
Easy depth change for different size armor
